

GENERAL FEATURES

- Enables the neutralization of improvised explosive devices (IEDs) hidden in containers made of plastic, tin, wood, etc., by generating a water jet.
- Has flexible application capacity for various mission profiles.
- A shaped explosive system that can be filled by the user.
- A directional apparatus that can be tailored to the structure, size, and type of the target to be neutralized.
- VOLKAN DISRUPTER achieves high success rates in neutralizing military-grade munitions and IEDs using small amounts of explosives.
- Performs neutralization by generating high detonation pressure and heat.
- Material Type: ABS Raw Material
- Length: 365 mm
- Diameter: 48.50 mm
